

erfi as system supplier for the medical industry

Decades of experience in planning and execution of working place systems, taking into account of all technical and ergonomic requirements, distinguishes us as a system supplier. Considering the increased demand for wet laboratories, we expand our portfolio with chemical and physical laboratory equipment, as well as fume cupboards with the furniture series erfi hybrid. The laboratory range is complemented by erfi mobiles for flexible positioning of medical devices and components. The erfi test systems for electrical safety and functional tests offer optimal solutions for all manufacturers of medical technology products.

Our portfolio for education, research & teaching and medicine:

- Wet laboratories with the furniture system erfi hybrid
- erfi mobile for devices and accessories
- erfi test systems for safety and functional tests

Wet laboratories by erfi

As one of the leading laboratory manufacturers, we supply chemical and physical laboratory equipment with laboratory fume hoods for university and medical research facilities as well as for schools of all kinds. We meet requirements of hospital and industrial research laboratories with our furniture series erfi hybrid in combination with standardized system components.

The laboratory furniture system erfi hybrid is characterized by:

- Highly stable steel or aluminium components (optional)
- Ergonomically placed surfaces and shelves
- Integration of all connections and electrical components,
- as well as adaptive and intelligent lighting systems

Mobiles for the affiliation of medical devices

erfi mobiles can be configured flexibly and individually, making it ideal for use in hospitals, medical practices and laboratories. High stability, exceptional workmanship and a wide range of possible combinations of erfi mobiles are convincing.

erfi mobiles meet the hygienic requirements in the hospital sector and are particularly easy to clean. Practical handles support quick and easy administration.

Testing systems by erfi

Customer-specific requirements, e. g. for medical device manufacturers determine the development and manufacture of complex test facilities and test systems at erfi. For many decades, we have specialised our products adjusted to the high demands in medical technology and have developed extensive test equipment for medical devices

Local maintenance In addition to manufacturing and installation, we also take care of the maintenance and calibration of your plant on site. This allows you to use it almost seamlessly.
